

Australian Shepherd Health & Genetics Institute, Inc.

Seminars

ASHGI's overriding purpose is to be an educational resource for dog owners and breeders as well as clubs because the better informed people are about inherited issues in the Australian Shepherd, the better equipped they will be to make informed breeding decisions, advise puppy-buyers and the public, and seek appropriate care for their dogs. We offer live, on-site seminars and shorter presentations for your club educational events.

Programs Available:

Dog Genes: A Seminar - A day-long presentation covering all aspects of canine genetics. This is available in Australian Shepherd and all/other breed versions.

Shorter presentations – from one to four hours in length – are available upon request. We have several presentations prepared or one can be designed to suit your group's specific interests.

Chats – Small, informal question and answer sessions for 20 or fewer people. These sessions generally last from one to three hours. Chats are recommended as a second-day follow-up event rather than a stand-alone presentation.
